Stride

Sneaker Theme

A bold streetwear theme for trainer and shoe stores. Shoppers save their shoe size once, and every page shows what is in stock in their size.

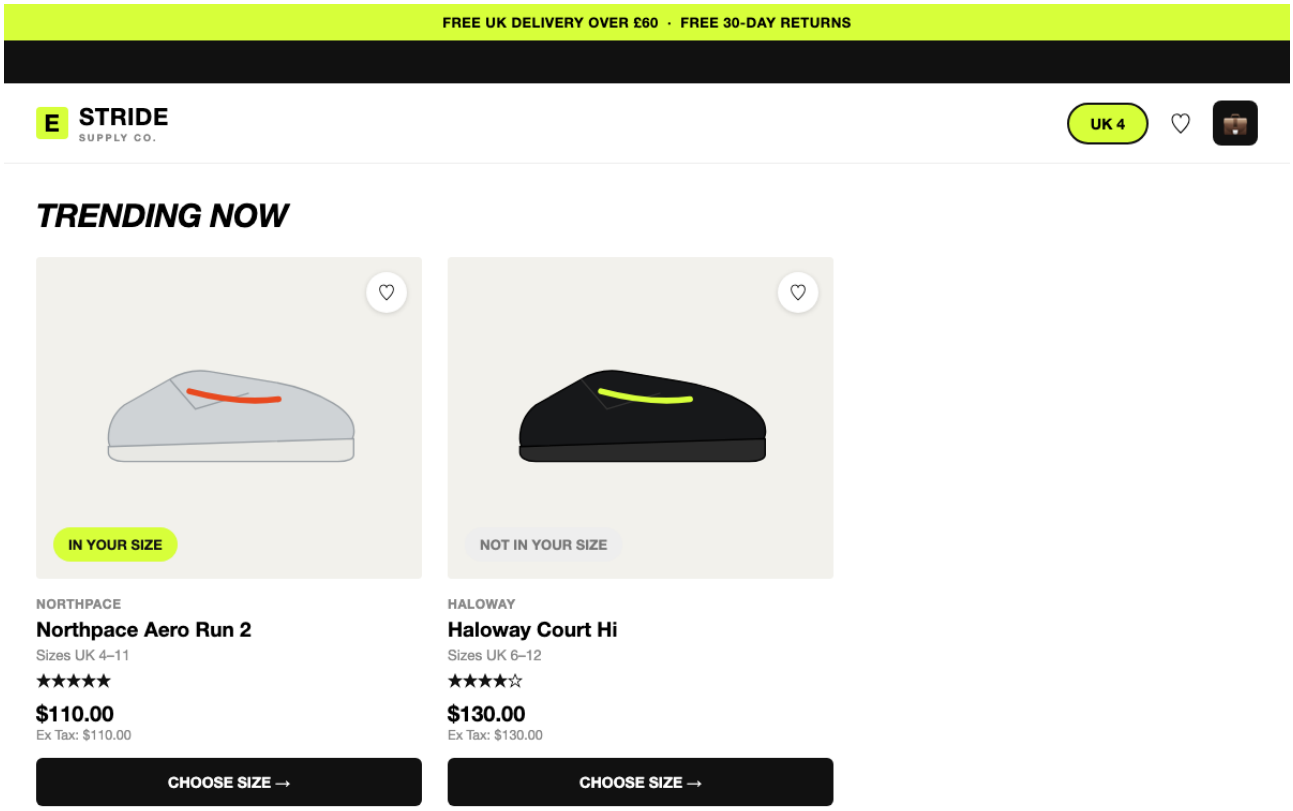

Tested on OpenCart 3.0.5.0 and OpenCart 4.1.0.4 · PHP 8 · By Stride Supply Co.

1. What the theme does

My size	A “Set my size” button in the header opens a panel. The shopper picks a size in UK, EU, US men’s or US women’s once. It is remembered on that device.
In-your-size badges	Every product card shows **In your size** or **Not in your size**, plus the size range in stock (for example “Sizes UK 4–11”).
Size buttons and size guide	On the product page the size option becomes large buttons. Sold-out sizes are shown crossed out. A size guide pop-up opens with a UK / EU / US / cm chart.
Shop your size	A page listing every style in stock in the shopper’s saved size, with category filters and sorting.
Bold streetwear design	Black and white design with one volt accent colour you can change. Fully responsive.
Demo content	One click installs 15 categories, 20 shoes from 6 brands, with stock per size.
No core file changes	Installed as a normal OpenCart extension (ocmod). Uninstalling returns the store to its previous theme.

Product cards showing the “In your size” and “Not in your size” badges once a shopper has set UK 4 as their size.

2. Which file to install

One file, `stride.ocmod.zip`, installs on both supported OpenCart versions — keep this exact file name, as OpenCart 4 uses it as the extension's folder name.

OpenCart 3	3.0.2.0 to 3.0.5.0
OpenCart 4	4.1.0.0 to 4.1.0.4

Make a backup of your files and database before installing any theme. The theme does not change OpenCart's core files — it adds its own template folder (OpenCart 3) or extension folder (OpenCart 4).

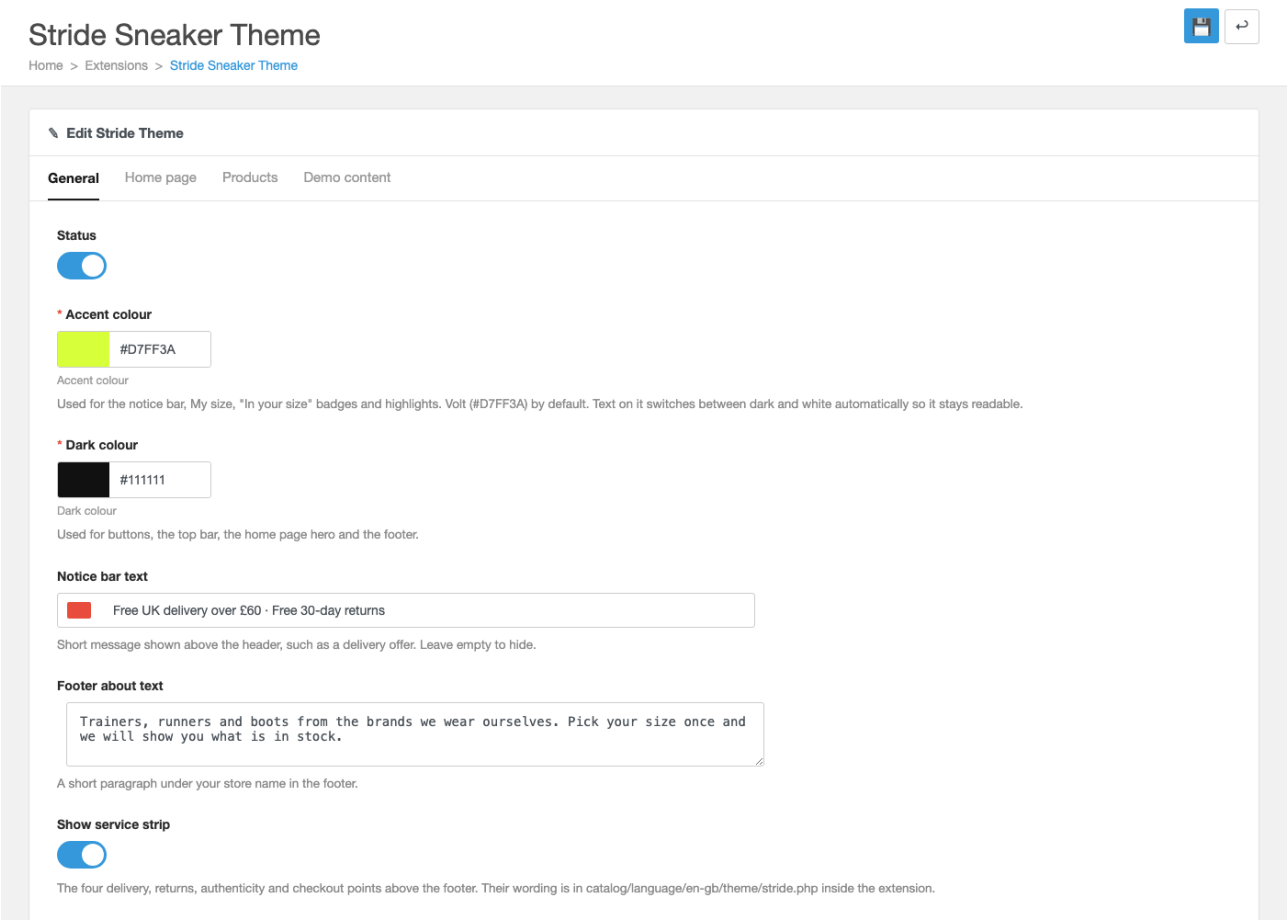

3. Installing on OpenCart 3

1. Go to **Extensions › Installer**, click **Upload** and choose `stride.ocmod.zip`.
2. Go to **Extensions › Extensions**, choose **Themes** in the filter, and click the green **Install** button next to **Stride Sneaker Theme**.
3. Click the blue **Edit** button for your store. On the **General** tab choose Stride as the store theme. You can also do this in **System › Settings › Edit store › Option › Theme**.
4. Go to **Extensions › Extensions**, choose **Modules**, and install **Stride My size**. Edit it and set the **Size option** to the option your products use for shoe size.
5. Optional: open the theme's **Demo content** tab and click **Install demo content**.
6. Click the blue **Save** button at the top right.

If the storefront still looks like the old theme, refresh the theme cache: on the Dashboard click the cog icon (top right) and refresh both **Theme** and **SASS**.

4. Installing on OpenCart 4

1. Go to **Extensions › Installer**, click **Upload** and choose `stride.ocmod.zip`. Then click the green **Install** button in the list of uploaded extensions.
2. Go to **Extensions › Extensions**, choose **Themes**, and install **Stride Sneaker Theme**.
3. Go to **Extensions › Extensions**, choose **Modules**, and install **Stride My size**.
4. Click **Edit** on the theme, choose Stride as the store theme on the **General** tab (or in **System › Settings › Edit store › Option › Theme**).
5. Edit **Stride My size** and set its **Size option** to the option your products use for shoe size (see section 6).
6. Optional: install the demo content, then click **Save**.

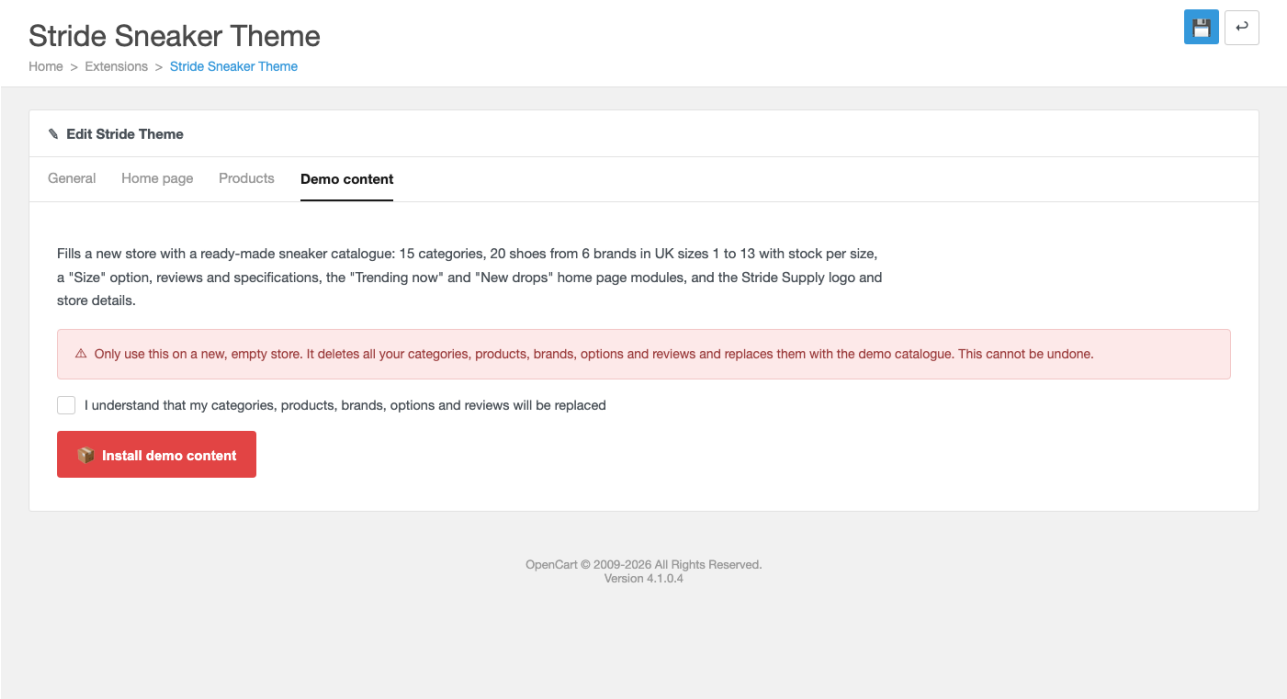

The theme's General tab — Extensions › Extensions › Stride Sneaker Theme.

5. Demo content

The **Demo content** tab on the theme fills a new store with a ready-made sneaker catalogue so you can see every feature straight away:

- 15 categories (Men, Women, Kids, Running, Lifestyle, Basketball, Skate, Boots, plus subcategories) and 6 brands
- 20 shoes with a Size option, stock per size in UK sizes 1 to 13 (some sizes sold out on purpose), reviews and specifications
- The “Trending now” and “New drops” home page modules
- The Stride Supply logo and store details

Warning. Only use this on a new, empty store. It deletes all your categories, products, brands, options and reviews and replaces them with the demo catalogue. This cannot be undone.

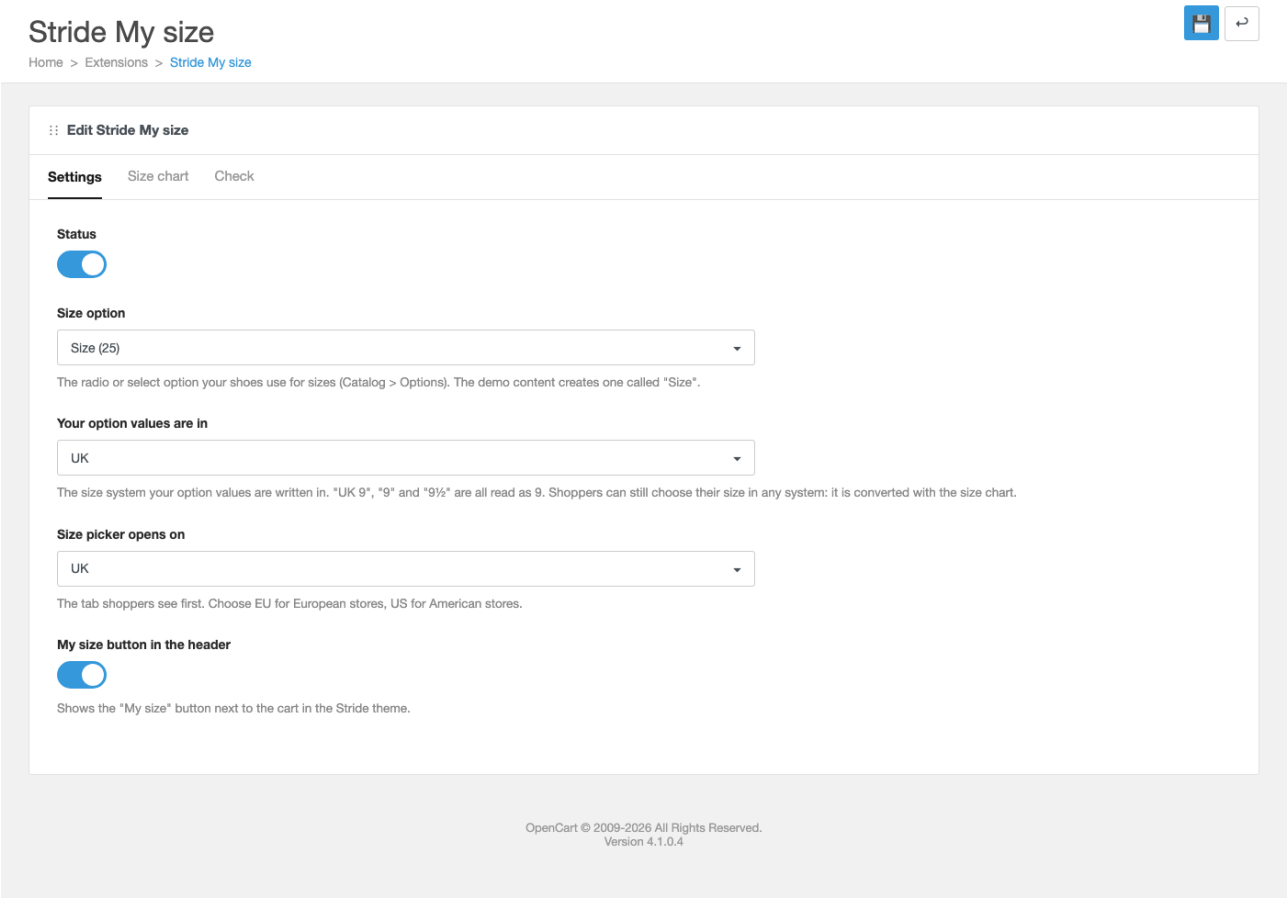

The theme’s Demo content tab.

6. Setting up sizes on your own products

The size features read a normal OpenCart product option — you don’t need any new fields.

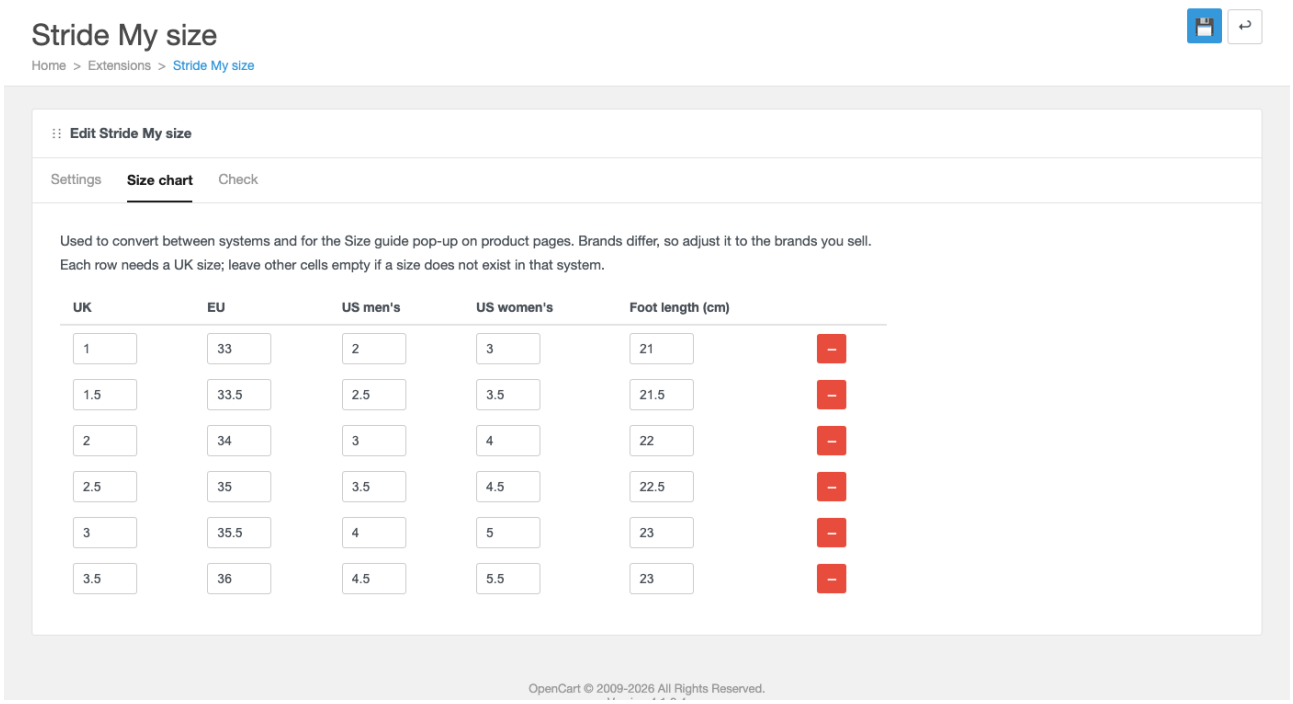

1. In **Catalog › Options**, create an option called Size (type Radio or Select) with your size values, for example UK 4, UK 4.5, UK 5… or S, M, L. If you already have a size option, choose it on the **Stride My size** module’s **Settings** tab.
2. On each product, add the Size option on the **Option** tab, enter the quantity for every size and set **Subtract stock** to Yes. A size with quantity 0 shows as sold out.
3. On the module’s **Settings** tab, tell Stride which numbering system your option values are written in (UK, EU, US men’s or US women’s), and which tab the size picker opens on first.

Stride My size — Settings tab (Extensions › Extensions › Modules › Stride My size).

How sizes are matched

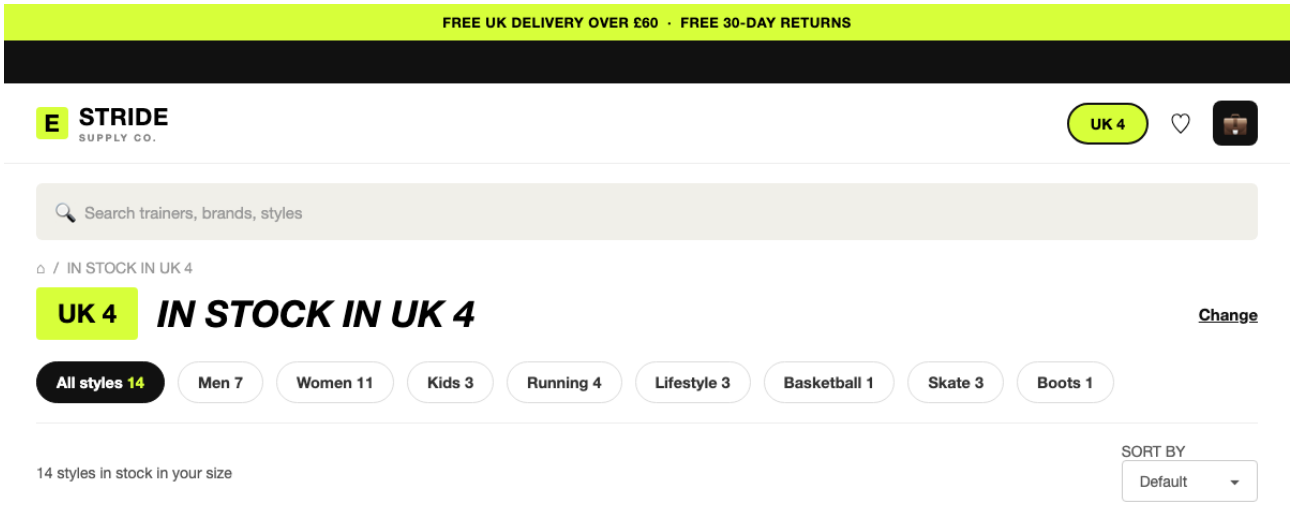

Each row of the **Size chart** tab needs a UK size; the other columns can be left empty if a size doesn't exist in that system. Option values are matched to a row by name ("UK 9", "9" and "9½" are all read as 9) or by any EU, US men's or US women's number in the chart. Brands size differently, so edit the chart, add rows, or adjust it to the brands you sell. The **Check** tab shows how every value of your Size option is currently read, and flags any value that doesn't match a row.

Stride My size — Size chart tab, used for conversion and the size guide pop-up.

7. Shop your size

Once a shopper has set their size, the **Shop my size** button (shown under “What size are you?” on the home page, and from the “UK 4” pill in the header) takes them to a page listing every style currently in stock in that size, with category pills and a sort order.

The Shop your size page, filtered to styles in stock in UK 4.

8. All settings, tab by tab

General	Status, accent colour, dark colour, notice bar text, footer about text, show service strip.
Home page	Home page hero image, and which category tiles appear on the home page.
Products	Show stock on product cards for products without a size option.
Demo content	Install the demo sneaker catalogue (see section 5).
Stride My size – Settings	Status, Size option, the numbering system your values are in, which tab the size picker opens on, and the header “My size” button.
Stride My size – Size chart	The UK / EU / US men’s / US women’s / cm chart used for conversion and the size guide (see section 6).
Stride My size – Check	A diagnostic list showing how each value of your Size option is read, and how many products use it.

Every text can be entered per language. The storefront wording (buttons, badges, messages) is in `catalog/language/en-gb/theme/stride.php`. To translate it, copy that file to your language folder.

9. Product images

Stride is designed around square product photos, which suit sneakers and side-profile shoe shots best.

Product card	600 × 600
Product page	900 × 900
Zoom (popup)	1600 × 1600
Category / related	600 × 600
Wish list / cart / compare	100 × 100

Image sizes and products per page are set in **System › Settings › Option** and **Image**, as for any OpenCart 4 theme — Stride does not add its own image-size tab.

10. Updating, uninstalling and troubleshooting

Uninstalling

Uninstall the theme in **Extensions › Extensions › Themes**. Any store that used Stride is switched back to OpenCart's own theme, so the storefront keeps working. You can uninstall the **Stride My size** module separately — doing so simply removes the size panel, badges and size buttons. Remove the demo content first if you installed it and no longer want it.

Troubleshooting

The storefront doesn't change	Check that Stride is the store theme (General tab) and its status is Enabled. On OpenCart 3, refresh the theme cache from the Dashboard cog.
No size badges on product cards	The products need the Size option with stock per size. Check the Stride My size Settings tab and that the values match a row of the size chart (use the Check tab).
A size shows sold out but you have stock	Make sure Subtract stock is set to Yes on that option value, and that the quantity is above 0.
Sizes don't convert correctly between UK/EU/US	Edit the Size chart tab to match the brand you sell — brands vary, especially between UK and US women's sizing.

11. Credits

Demo product illustrations are original artwork made for this theme. Fonts are served from your own store, with no calls to outside font services.
